

a lighting control equipment with integral light intensity memory

MEMOLIGHT

standardized for 150 channels, 600 memories (or 250 channels (ways) maximum)

An economical solution for experienced lighting specialists

NEW TECHNOLOGY

The ADB MEMOLIGHT is characterized by a new technology and the use of a « mini-cassette » »tape recorder as memory system.

For its price, the ADB MEMOLIGHT is the most elaborate equipment built today. It at last gives a practical solution to the problem of « memories » for medium sized lighting controls.

The particularly compact desk contains all the required electronic circuitry.

A NEW WAY OF WORK FOR LIGHTING SPECIALISTS

This new system, extremely simple to operate, gives the whole variety of operational capabilities similar to those of much more elaborate equipments.

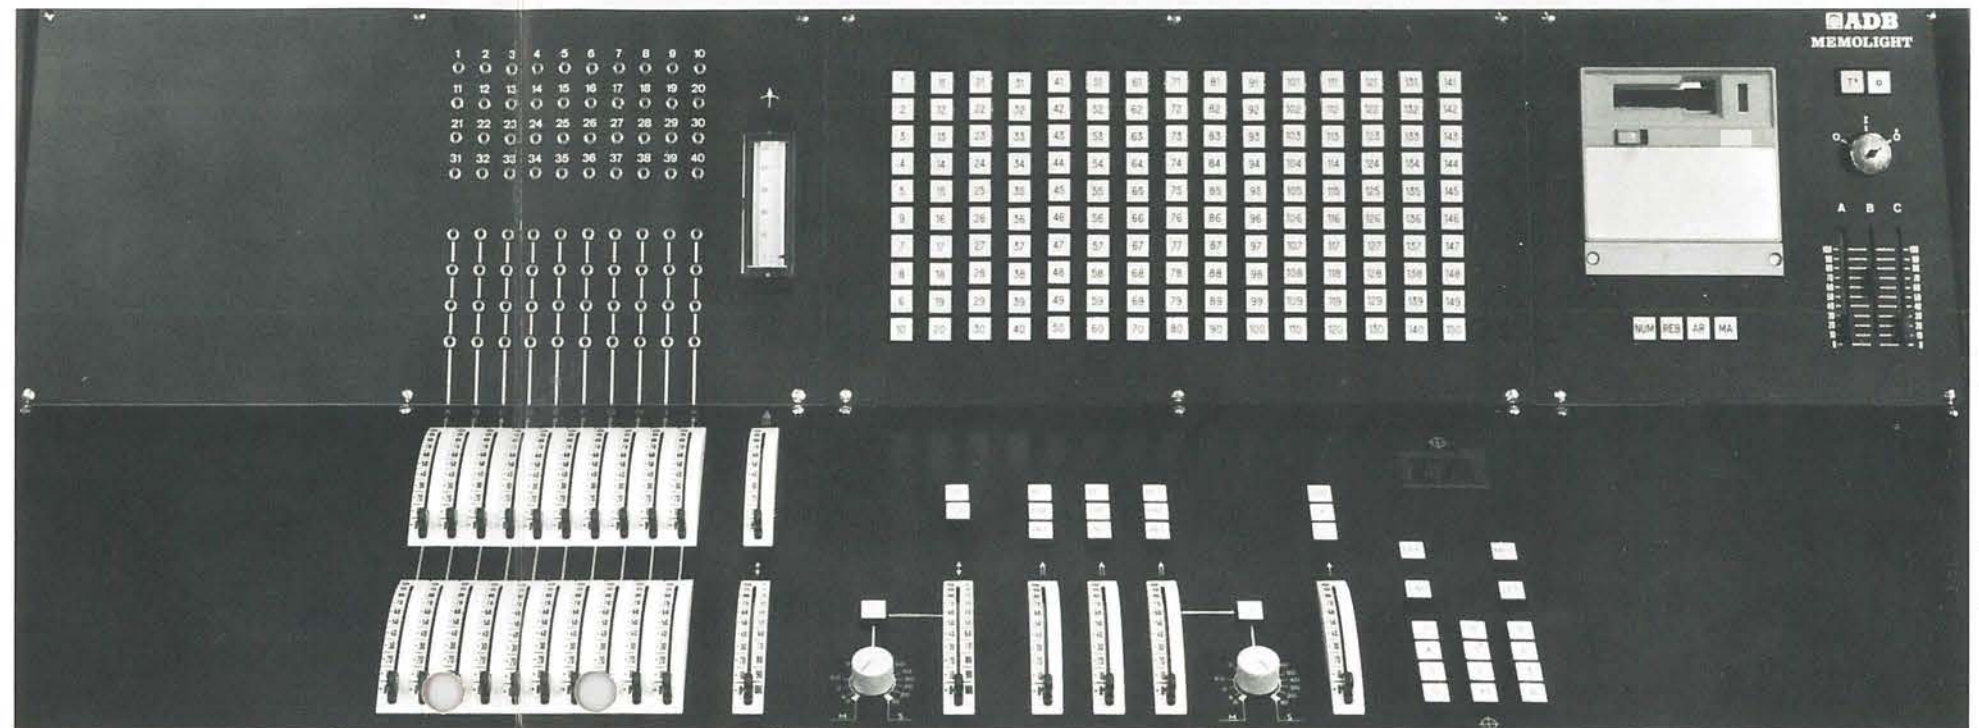

600 lighting cues recorded on one side of a mini-cassette

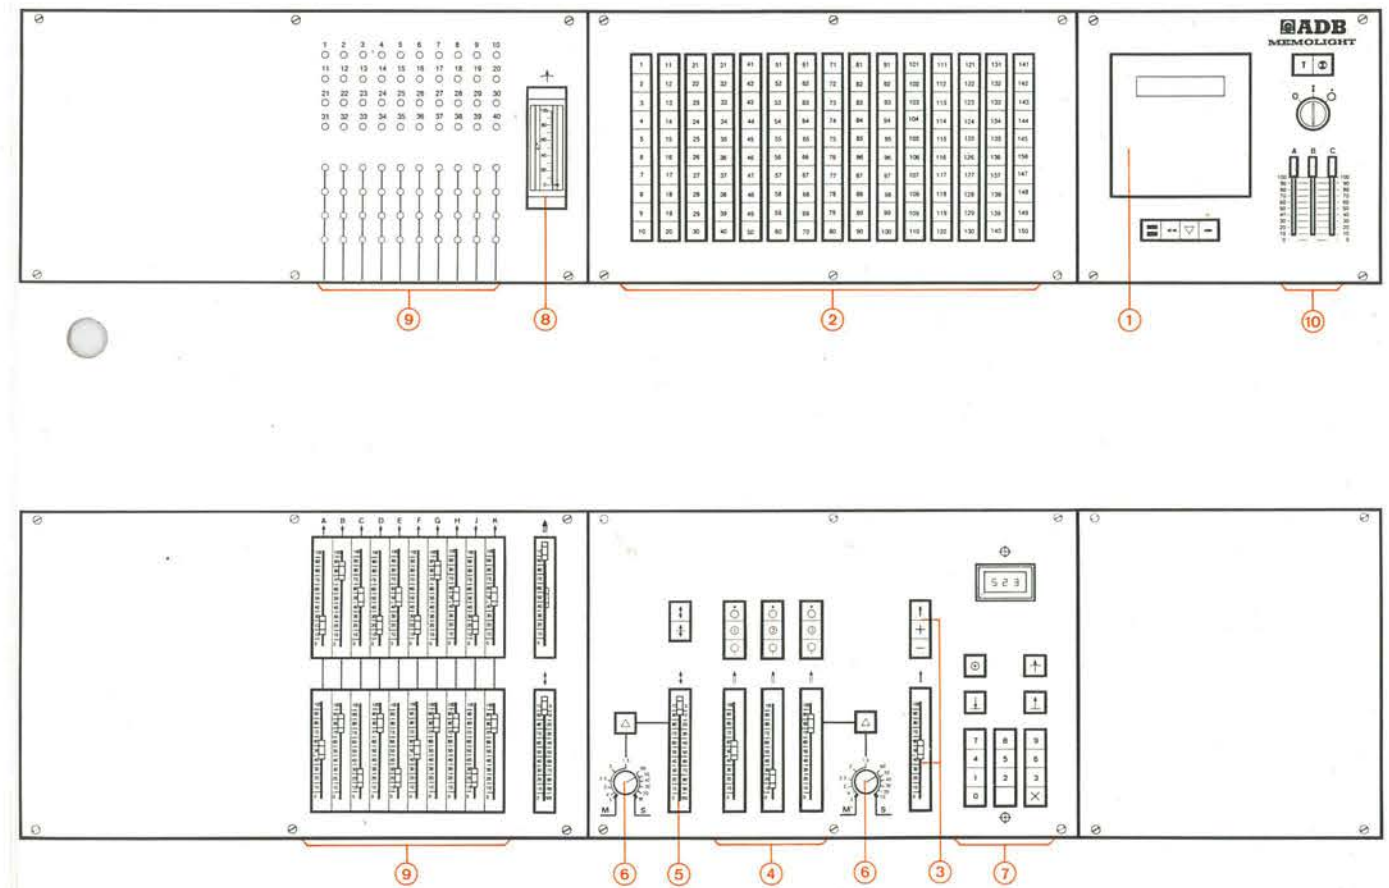

NUMEROUS OPERATIONAL CAPABILITIES

Sequential or non-sequential recording and playback of lighting cues.

- equipment standardized for upto 150 channels
- visual control of operations
- recording and playback time of a cue is less than one sec.
- separate controls for special effects
- extremely compact
- high reliability (MOS circuitry)
- rational esthetical design
- quick to install

- 1 Recording of lighting cues on mini-cassette tapes
- 2 Push button selector and circuit mimic
- 3 Fader lever for adjusting selected circuits
- 4 Three group general controls
- 5 Dipless linear crossfade lever
- 6 Delayed action systems of the dipless linear cross fader and of one group
- 7 - memory number selector and indicator
- memory read button
- memory record button
- cue cancel button
- circuit intensity measure button
- 8 Circuit intensity meter
- 9 Manual controls
- 10 Auditorium lighting controls

A SINGLE OPERATOR IS ENOUGH

Simplification of controls is an important asset as regard operations.

The operator will quickly be subdued by the performances considerably overpassing those of any traditional system of an equivalent price.

MAIN OPERATIONAL CAPABILITIES OF ADB « MEMOLIGHT »

- Dimming of any channel circuit from full light to total extinction
- Manual presetting of a cue in any of the 3 playback groups
- Cue recording on a magnetic tape
- Automatic numbering of memories containing each cue
- Simultaneous playback of 3 different cues (3 groups)
- Double lever cross fade and single lever dipless linear crossfade between lighting cues
- Measure of each channel's intensity
- Immediate correction of any circuit's light level
- Automatic call up and playback of memory contained data
- Visual control of group contents
- Manual control of special effects
- Electronic delayed action of the dipless linear crossfade between cues
- Electronic delayed action of cues through one group.

ADB the team at the peak of new techniques achieved by experience.
